## Seminar 3: Cyber Resilience & Compliance in the AI Era

Wednesday 13<sup>th</sup> May 2026 | 09:00 - 12:30 | Amathus Beach Hotel, Limassol

### Featured Speakers

**Ilias Polychroniadis Neurosoft**  
Country Manager CY & Presales  
Region Lead

**Constantinos Gakopoulos**  
A.C. Slashopt CEO

**Babis Kalevrosoglou**  
Neurosoft Head of Cyber  
Defence Services

# NEUROSOFT

**#CYFA #Seminars #2026**

Participants will receive a Certificate of Attendance for up to 3CPD Unit Hours.

The Seminar will be conducted in Greek and English

### Seminar Aims and Objectives

CYFA is pleased to present **Mr Ilias Polychroniadis**, **Mr Constantinos Gakopoulos**, and **Mr Babis Kalevrosoglou** for a three-hour seminar titled “Cyber Resilience & Compliance in the AI Era”.

The seminar will be held **in person** on **Wednesday, 13 May 2026**, from **09:00 to 12:30**, at the **Amathus Beach Hotel, Limassol**.

#### Aims and Objectives:

**Aims:** Artificial Intelligence is rapidly transforming the cybersecurity landscape—introducing new risks, reshaping compliance requirements, and redefining how organizations detect, respond to, and prevent cyber threats. This seminar delivers a structured, end-to-end view of cybersecurity in the age of AI, combining strategic insights, real-world cases, and practical operational perspectives.

Participants will explore the emerging threat landscape driven by AI, including automated and scalable attacks, data manipulation, and advanced fraud scenarios that make the “next day” risk environment increasingly complex. At the same time, growing regulatory pressure across corporate, financial, and legal sectors is driving the need for stronger governance, clear processes, and robust compliance frameworks to ensure AI is adopted securely and responsibly.

Through real-world incident examples, the seminar highlights how cyberattacks are evolving and how incident response must adapt. It demonstrates how attackers leverage AI for speed and sophistication, while defenders must use AI to enhance detection, investigation, and response—shifting from reactive approaches to intelligence-driven cyber defense.

The seminar also provides a forward-looking perspective on cybersecurity operations, examining how core services such as SOC, threat intelligence, and managed detection and response are evolving. Key challenges—such as operational complexity, skills shortages, and alert fatigue—are addressed, alongside the role of AI in enabling more automated, risk-driven, and predictive security models.

At its core, the seminar highlights that technology alone is not enough. The real challenge lies in transforming organizational culture—aligning people, processes, and strategy to securely embrace AI and build resilient, future-ready cybersecurity capabilities.

## Seminar 3: Cyber Resilience & Compliance in the AI Era

**Objectives:** By the end of the seminar, participants will be able to:

- Understand new and upcoming AI-related threats and why the next-day scenario is more complex.
- Recognize compliance and regulatory requirements in corporate, financial, and legal environments.
- Apply mitigation strategies, from detection to prevention.
- Learn from real-world incidents and how cyber defense evolves with AI.
- Understand how AI is transforming cybersecurity services and operations.
- Identify the need for cultural change to securely adopt AI.

### Seminar Agenda

|                      | Agenda                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Speaker                        |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| <b>09:00 - 09:15</b> | Registration                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                |
| <b>09:15 - 09:30</b> | Seminar Intro                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>Constantinos Gakopoulos</b> |

This seminar is intended for professionals seeking an up-to-date understanding of cybersecurity threats, their practical impact, and recent developments in the field.

For registrations, please visit our [website](#) or complete and sign the registration form attached and submit it to the Cyprus Fiduciary Association e-mail address [info@cyfa.org.cy](mailto:info@cyfa.org.cy).

Deadline for Registration: **Monday, 11<sup>th</sup> May 2026**

### Speakers' Biographies

#### **Constantinos Gakopoulos - Chief Executive Officer of A.C.Slashopt**

Constantinos Gakopoulos brings three decades of distinguished leadership within the IT sector. Throughout his career, he has successfully guided global projects and served clients across Europe and the Middle East, demonstrating a strong commitment to technological advancement and operational excellence. His expertise as an Infrastructure & Security consultant is complemented by significant experience in conducting GAP analyses and IT audits, helping to ensure robust systems and compliance for a diverse range of organisations. His authoritative approach and deep industry knowledge make him a respected voice in the field of IT leadership.

#### **Ilias Polychroniadis - Country Manager (Cyprus) & Regional Presales Lead, Neurosoft**

Ilias Polychroniadis is a cybersecurity professional with more than 15 years of experience in designing and delivering effective security strategies for organizations across multiple industries. Based in Cyprus, he leads regional presales activities at Neurosoft, supporting clients in strengthening their security posture and adapting to an increasingly complex threat landscape. He holds an MSc, industry-leading certifications, and has strong expertise in security architecture, network security, OT security, and Security Operations Center (SOC) services. Throughout his career, he has worked closely with organizations in critical sectors, helping them build resilient security frameworks and improve visibility across their environments.

#### **Babis Kalevrosoglou – Head of Cyber Defense Services, Neurosoft**

Babis Kalevrosoglou leads Cyber Defense Services at Neurosoft, overseeing SOC, MDR, Threat Intelligence, and Incident Response operations. He has extensive experience managing high-impact cybersecurity incidents, particularly ransomware cases, and supports organisations through investigation, containment, and coordinated recovery under real operational conditions. His work focuses on strengthening incident response readiness, accelerating detection-to-response timelines, and translating technical findings into executive-level decision support during crises. He holds an MSc in Digital Systems Security and an Executive MBA (EMBA).
